

## Security Engineer (80%-100%)

### Who we are

NOUMENA Digital AG is a rapidly growing innovative Swiss-based Technology Company.

We build enterprise products and solutions across a variety of industries with our own smart contract language on our cutting-edge technology. Our success is built on process-oriented distributed technology, a focused vision and strategy, an international team of business and technology experts, a cross-industry customer base and a strong external partner network.

### Culture

We value engineers that are excited about developing innovative software. Our engineers are comfortable in the fast-changing world of start-ups. They are creative, like to figure things out together and are eager to move things forward.

### Role

We seek a security engineer that has experience with and understands managing complex private and public facing systems in the cloud.

- Someone who will lead the strategy to secure the applications we build for our customers.
- Someone who can design and implement security tools that we can reuse in all our products.
- Someone who will take part with the devops team to secure all of our continuous integration and continuous deployment tool-chain in the cloud.
- Someone who can educate our product and software engineers as well as our customers to apply best practices for creating and managing secure software.

### Qualifications

- A degree in computer science or comparable
- A long-term interest in developing as a security expert
- A proven track-record securing software systems
- Experience securing micro-service architectures
- Experience integrating cloud-based with on-premise-based systems
- Experience with conducting penetration testing with customer systems
- Ideally, experience with complex topics such as (or similar to) Oauth2 claims, party/user based access, virtual private clouds
- Ideally has experience with the JVM stack, kotlin, and distributed ledger technology

### We Offer

- A competitive compensation package
- Work in an agile team with highly experienced Software Engineers, DevOps, Business Analysts and Product Managers
- Exposure to multiple industries (finance, energy, automotive industry, ...)

### Other Requirements

A Swiss or EU/EFTA passport or a valid Swiss work permit type B or C
